of laboratories

The success story

Mérieux NutriSciences presented the need to **accelerate their own processes and optimize productivity**. Because of outdatedness, out-of-support and the unavailability to receive new updates, their previous ERP system did not keep up with the company's demands. This resulted in the challenge to move on to a new solution: **a modern, updated and secure system** that keeps up with Digital Transformation. This solution was **Dynamics 365**. In this crucial step, Würth Phoenix proved to be an ideal partner accompanying and supporting the company in both the choice and implementation phases on time and within the project's budget set by the company.

The words of...

Lorenzo Cioppi – CFO e Project Manager

"Excellent management of the project both in realization and post go-live phases... we have found a great involvement in all users with the highest collaboration with the project consultants."

Business outcomes

- Transition to a modern, updated and secure system;
- Incorporation of new process (such as purchase requests with approval requests) and refinement of the already existing ones;
- Time saving, higher quality and streamlined processes in different fields:
 - Supply: shorter times dedicated to the insertion of purchase orders;
 - Logistics: greater ease in consultation of availability of goods in the warehouse;
 - Accounting: integration of credit management processes and automatic reminders
